

How to Port your number when you have DSL

Tue, Nov 19, 2019 [Digital Phone Service](#) 2931

1. Check to see if NTInet VoIP is available.
2. The following carriers currently offer the ability to keep your DSL service and transfer your number. *Restrictions may apply.*
 - AT&T High Speed Internet
 - If your phone company is not listed. You can still transfer your phone number by moving your DSL service to another phone line.
 - Order a second phone line from your current provider. Please note that you only need to order basic service (limited local and no long distance) to minimize the expense of this line.
 - Have your DSL service moved to the new phone line.

Please be sure your current provider does not cancel or disconnect your original line. NTInet cannot transfer a number that has been cancelled or disconnected.

Submit the (LOA) Letter Authorization request to NTInet for your original phone line.
