Do I need to set the "aggressiveness" of the NTInet SPAM filter?

Tue, Nov 19, 2019 [Email](#), [SPAM Filter](#) 3425

No. NTInet Message Assurance requires no filter tuning whatsoever.

 You don't need to train the spam filter and there is no "knob." Message Assurance defines spam in absolute terms – a violation of trust indicated by attempts to falsify the sender, defraud the recipient, or otherwise misrepresent the intent of an email. With that definition,Message Assurance creates precise rules that target each spam campaign without blocking legitimate emails. The net result is that the end user does nothing to intervene – Message Assurance does the work.
